Standards for Hyperbaric Oxygen Therapy (HBOT) **Services**

Version 2.1

Issue date: 28/04/2022

Effective date: 28/04/2022

Health Policies and Standards Department Health Regulation Sector (2022)

INTRODUCTION

Health Regulation Sector (HRS) forms an integral part of Dubai Health Authority (DHA) and is mandated by DHA Law No. (6) of 2018 to undertake several functions including but not limited to:

- Developing regulation, policy, standards, guidelines to improve quality and patient safety and promote the growth and development of the health sector.
- Licensure and inspection of health facilities as well as healthcare professionals and ensuring compliance to best practice.
- Managing patient complaints and assuring patient and physician rights are upheld.
- Managing health advertisement and marketing of healthcare products.
- Governing the use of narcotics, controlled and semi-controlled medications.
- Strengthening health tourism and assuring ongoing growth.
- Assuring management of health informatics, e-health and promoting innovation.

The Standards for HBOT Services aims to fulfil the following overarching DHA Strategic Priorities (2022-2026):

- Pioneering Human-centered health system to promote trust, safety, quality and care for patients and their families.
- Make Dubai a lighthouse for healthcare governance, integration and regulation.
- Strengthening the economic contribution of the health sector, including health tourism to support Dubai economy.

ACKNOWLEDGMENT

The Health Policy and Standards Department (HPSD) developed this Standard in collaboration with Subject Matter Experts. HPSD would like to acknowledge and thank these healthcare professionals for their dedication toward improving quality and safety of healthcare services in the Emirate of Dubai.

Health Regulation Sector

EXECUTIVE SUMMARY

The purpose of this document is to assure the provision of the highest levels of safety and quality *Hyperbaric Oxygen Therapy (HBOT) services* at all times. The standards have been developed to align with the evolving healthcare needs and international best practice. The standards include several aspects required to provide effective, efficient, safe and high-quality HBOT Services. The standards include the Registration and licensure procedure, health facility and healthcare professional requirements, management of HBOT service, equipment and maintenance and fire safety.

The key updates on Version 2.1 are set out below:

- Class A (multiplace chambers) shall be used only in DHA licensed hospitals and standalone specialised centers for HBOT and shall be located on the ground floor.
- 2. Class B (Monoplace chambers) shall be used in approved DHA licensed health facilities.
- 3. There shall be two (2) Chamber Operators for every multiplace chamber during all working hours of the facility or two (2) chamber operators where multiplace chambers are co-located and operated with a single centralised operating console, with direct visual access to the entire HBOT chamber(s).
- 4. The IA exposure limit has been modified. To reduce the risk of decompression illness for staff, exposure should be based on the depth of pressure, gases breathed, bottom time, decompression profile and surface interval time as calculated using the US Navy Dive tables. The Appendix 5 has been added with the latest US Navy Dive Tables.
- 5. The requirement for all patients to undergo a PCR test has been eliminated; all patients shall be screened for temperature and other COVID- 19 symptoms prior to entering the HBOT chamber.

If found to be symptomatic, they should leave the health facility and produce a negative PCR test result to continue the HBOT service.

- 6. Minimum staffing ratios for clinically stable patients to Inside and Outside Attendants is 8:1. This ratio is comprised of ACLS certified healthcare professionals, who will be readily available in the event of any emergency. This ratio may be exceeded at any time based on patient acuity.
- 7. The standard shall align with the following:
 - a. DHA, Health Facility Guidelines (HFG), 360 Outpatient Unit
 - b. Unified Professional Qualification Requirement
 - c. DHA Guidelines for Managing Health Records
 - d. DHA Guidelines for Patient Consent
 - e. DHA Communicable Disease Notification Policy
 - f. DHA Clinical Privileging Policy
 - g. Any DHA COVID-19 related Policies, Standards or Guidelines that may be relevant.

هـيئــة الصحـة بدبــي
DUBAI HEALTH AUTHORITY

DEFINITIONS

Healthcare Professional: are healthcare personal working in healthcare facilities and required to be licensed as per the applicable laws in United Arab Emirates.

Healthcare Workers: is an individual employed by the hospital, (whether directly, by contract with another entity), provide direct or indirect patient care, this includes but not limited, healthcare professionals, medical and nursing students, administrative staff and contract employees who either work at or come to the hospital site.

Hyperbaric Oxygen Therapy (HBOT): is a treatment in which the patient is placed in a chamber and breathes oxygen at higher than local atmospheric pressure.

Hyperbaric therapeutic chamber: is a pressure vessel capable of accommodating one or more persons with the purpose of providing medical treatment.

Incompetent patient: is a patient who either lack the full legal capacity or have the full capacity, but unable to provide an Informed Consent.

Informed Consent: is an agreement or permission accompanied by full information on the nature, risks and alternatives of a surgical or interventional procedure before the physician begins the procedure/treatment. Accordingly, the patient either consents to or refuses treatment.

Inside Attendant (IA): is a DHA licensed Healthcare Professional who is assessed physically and mentally and declared medically fit to provide direct care and observation in a HBOT chamber during the treatment.

Legal guardian: is a person appointed by the law to consent in place of an incompetent patient based on UAE federal laws and/ or local regulation, when the patient is unable to provide Informed Consent due to an illness or incompetency.

Licensure: is a process of issuing an official permission to operate a health facility to an individual, government, corporation, partnership, Limited Liability Company (LLC), or other form of business operation that is legally responsible for the facility's operation.

OHM: is the electric unit of resistance.

Patient: is any individual who receives medical attention, care or treatment by any healthcare professional or admitted in a health facility.

Standards for Hyperbaric Oxygen Therapy Services

1. BACKGROUND

Hyperbaric Oxygen Therapy (HBOT) is a treatment in which the patient is placed in a chamber and breathes Oxygen (O_2) at higher-than-atmospheric pressure. Initially, HBOT was designed for patients in Pulmonary Hospitals and for divers and miners. In recent times, it has evolved and is a thriving and appreciated branch of medicine that is indicated for the treatment of an increasing number of acute and chronic conditions (**Appendix 1**), but it is contraindicated in certain conditions (**Appendix 2**).

Hyperbaric chambers are classified according to occupancy as follows:

- Class A- Human, multiple occupancy (Multiplace Chamber)
- Class B- Human, single occupancy (Monoplace Chamber)
- Class C- Animal, no human occupancy.

Because of the unique atmospheric conditions to which the patient is exposed, there are concerns about the safety aspects of this therapy. Possible complications during HBOT include baro-traumatic lesions (middle ear, nasal sinuses, inner ear, lung and teeth), oxygen toxicity (central nervous system, lung), confinement anxiety, and ocular effects (myopia, cataract growth).

Safe HBOT requires special equipment, specially trained physicians and other professionals, adequate infrastructure and detailed organizational arrangements, policies and operating procedures. These standards are hence developed to ensure provision of safe, high quality and appropriate hyperbaric medical care for patients with conditions likely to benefit from HBOT.

2. SCOPE

2.1. HBOT services in DHA licensed health facilities.

3. PURPOSE

3.1. To assure provision of the highest levels of safety and quality HBOT services in Dubai Health Authority (DHA) licensed health facilities.

4. APPLICABILITY

4.1. DHA licensed healthcare professionals and health facilities providing HBOT services.

STANDARD ONE: REGISTRATION AND LICENSURE PROCEDURES

- 5.1. All health facilities providing HBOT services shall adhere to the United Arab Emirates (UAE) Laws and Dubai regulations.
- 5.2. Health facilities aiming to provide HBOT services shall comply with the DHA licensure and administrative procedures available on the DHA website https://www.dha.gov.ae.
- 5.3. Licensed health facilities opting to add HBOT services shall inform Health Regulation Sector (HRS) and submit an application to HRS to obtain permission to provide the required service and shall meet the following requirements:
 - 5.3.1. Employ a Consultant/Specialist Physician in Undersea Hyperbaric Oxygen Medicine.
 - 5.3.2. Employ DHA licensed healthcare professionals to satisfy the functional program of the health facility.
 - 5.3.3. Install equipment for the provision of HBOT service.

- 5.3.4. Have appropriate equipment and trained healthcare professionals to manage critical and emergency cases.
- 5.4. The health facility should develop and maintain the following policies and procedure; that are read and signed off by all staff:
 - 5.4.1. Emergency action plan
 - 5.4.2. Fire safety and evacuation
 - 5.4.3. Incident reporting
 - 5.4.4. Infection control measures
 - 5.4.5. Management of Pediatric Patients (if applicable)
 - 5.4.6. Management of Critically ill patients
 - 5.4.7. Management of patients with known infections
 - 5.4.8. Medication management
 - 5.4.9. Patient education and Informed consent
 - 5.4.10. Patient acceptance criteria
 - 5.4.11. Patient health record
 - 5.4.12. Patient privacy and confidentiality
 - 5.4.13. Patient discharge/transfer
 - 5.4.14. Staffing.
- 5.5. The health facility shall provide documented evidence of contracts for the following:
 - 5.5.1. Contract with a nearby hospital (in case not located in a hospital) in case of any complication or emergency
 - 5.5.2. Clinical laboratory services

- 5.5.3. Equipment maintenance with manufacturing company or an authorised dealer
- 5.5.4. Housekeeping services
- 5.5.5. Laundry services
- 5.5.6. Medical waste management as per Dubai Municipality (DM) requirements.
- 5.6. The health facility shall maintain charter of patients' rights and responsibilities posted at the entrance of the premise in two languages (Arabic and English).
- 5.7. The health facility shall have in place a written plan for monitoring equipment for electrical and mechanical safety, with monthly visual inspections for apparent defects.
- 5.8. The health facility shall ensure it has in place adequate lighting and utilities, including temperature controls, water taps, medical gases, sinks and drains, lighting, electrical outlets and communications.
- 5.9. Relocation of the HBOT chamber shall be possible only with DHA approval.

STANDARD TWO: HEALTH FACILITY REQUIREMENTS

- 6.1. The HBOT facility shall not be located in a mall or an industrial area.
- 6.2. Class A (multiplace chambers) shall be used only in DHA licensed hospitals and standalone specialised centers for HBOT and shall be located on the ground floor.
- 6.3. Class B (Monoplace chambers) shall be used in approved DHA licensed health facilities.
- 6.4. For general health facility requirements, the health facility should meet the relevant requirement as per the DHA, Health Facility Guidelines (HFG), 360 Outpatient Unit.
- 6.5. A HBOT facility shall have an emergency exit with visible signs directing patients in case of an emergency.

- 6.6. The health facility shall ensure easy access to the health facility and treatment areas for all patient groups.
- 6.7. The specific HBOT service area shall include, but not limited to:
 - 6.7.1. Reception and waiting area
 - 6.7.2. Consultation/examination room
 - 6.7.3. Holding area
 - 6.7.4. Patient changing facility
 - 6.7.5. HBOT treatment room
 - 6.7.6. Gas storage room
 - 6.7.7. Compressor room
 - 6.7.8. Gurney/stretcher storage
 - 6.7.9. Clinical and non-clinical storage
 - 6.7.10. Clean and dirty utility
 - 6.7.11. Administrative activities area.
- 6.8. HBOT treatment room shall:
 - 6.8.1. Conform to National Fire Protection Association (NFPA) 99, Chapter 14 and Dubai Civil Defence (DCD) requirements.
 - 6.8.2. Have an antistatic, impervious, fire proof, monolithic, joint free and washable flooring, with no carpets or wooden flooring.
 - 6.8.3. Have window(s) with an outside view.
 - 6.8.4. Be adequately ventilated with a smoke evacuator.
 - 6.8.5. Have easy access for wheelchairs.

- 6.8.6. Have access to toilets.
- 6.8.7. Be provided by approved sprinkler heads equipped with fusible and temperature elements that have ratings as low as possible.
- 6.8.8. Have "No smoking" signs visibly displayed.
- 6.8.9. Preferably provide a metal detector at the entrance of the HBOT treatment room to ensure that the patient do not carry any form of metal into the chamber.
- 6.9. Class A (Multiplace) treatment room requirements:
 - 6.9.1. The health facility housing a Class A chamber shall be designed not to obstruct egress of patients and staff. The rapid or emergency removal of a patients or healthcare professional from one chamber shall not restrict the orderly, rapid and simultaneous removal of patients or healthcare professional from other chambers.
 - 6.9.2. A minimum of two (2) exits shall be provided for the treatment room unless a single exit opens directly to a primary evacuation route.
 - 6.9.3. Doorways of egress shall have a minimum opening of one (1) meter.
 - 6.9.4. The Class A chamber room should have a minimum clearance of 2.5 meters in front of a chamber entry door, that is intended for gurney/stretcher access.
 - 6.9.5. There shall be a minimum of 0.9-meter clearance around any part of the chamber system that defines an exit pathway.

- 6.9.6. If the chamber control console is immediately adjacent to the chamber, there should be a minimum clearance of 0.9 meter between the control console and any obstruction.
- 6.9.7. There should be a minimum clearance of 0.6 meters in a pathway that allows access to valves used in chamber operation.
- 6.9.8. There should be a minimum clearance of 0.6 meters in a pathway that allows access to areas of the chamber that require cleaning or maintenance.
- 6.9.9. Entries designed for wheelchairs or wheeled gurneys should have access ramps. A ramp should be a minimum width of 45 inches, a maximum of height of 0.75 meters, have a maximum slope of 1 in 12, and have handrails on both sides. These ramp specifications are not necessary if the slope of the ramp is no steeper than 1 in 20.
- 6.9.10. The chamber shall have breathing equipment for all occupants, and an extra spare one.
- 6.9.11. All material inside the chamber shall be fire resistant and HBOT environment compatible.
- 6.10. Class B (Monoplace) treatment room requirements:
 - 6.10.1. The health facility housing a Class B chamber shall be designed not to obstruct egress of patients and staff.
 - 6.10.2. In the case of multiple Class B chambers installed in a single setting, the rapid or emergency removal of a patient from one chamber shall not restrict in any way the rapid and simultaneous removal of patients from other chambers.

- 6.10.3. Exit doorways of egress shall have a minimum opening of one (1) meter.
- 6.10.4. The space required to house Class B chambers and supporting equipment shall not be less than eighteen (18) sq. meters to host one (1) monoplace hyperbaric chamber and patient-transfer gurney.
- 6.10.5. There shall be a minimum clearance of 0.9 meters around any part of the chamber system that defines an exit pathway.
- 6.10.6. If the chamber control console is integrated into or immediately adjacent to the chamber, there shall be a minimum clearance of 0.9 meters between the control console and any obstruction.
- 6.10.7. There shall be a minimum clearance of 0.6 meters in a pathway that allows access to valves or controls used in chamber operation. If the chamber has a patient-loading device, this clearance shall be maintained when the patient loading device is extended out of the chamber.
- 6.10.8. Any part of the chamber that must be accessed shall be at least 0.3 meters away from any obstruction, unless the chamber is fitted with casters.
- 6.10.9. There shall be an O_2 shut-off valve for each chamber, which is accessible to the chamber operator.
- 6.10.10. Any electrical service outlets located within three (3) meters of the Class B chamber entrance shall be located no less than 0.9 meters above floor level.
- 6.10.11. Lighting over the Class B chamber shall be incandescent, preferably with dimmer control.

- 6.10.12. Fluorescent lighting installed in rooms housing Class B chambers shall not be located directly over the chambers.
- 6.10.13. If the room housing Class B chambers has windows, the chambers should be protected from direct exposure to sunlight.
- 6.10.14. There shall be screens between chambers to ensure patient privacy.
- 6.10.15. There shall be a 0.3 meters clearance at the foot of the chamber for unobstructed gas connection at the foot of the chamber.
- 6.11. Class B (Monoplace Chambers), it shall:
 - 6.11.1. Not be located in direct sunlight or close to a heat source.
 - 6.11.2. Be easily accessible to the patient and staff.
 - 6.11.3. Be free of cracks internally or externally.
 - 6.11.4. Be free of corrosion, damage, dents, gouges or other damage internally and externally.
 - 6.11.5. Have an atmosphere free of toxic or flammable gases.
 - 6.11.6. Have alarms for low-pressure gas monitoring panel, which are tested and maintained routinely.
 - 6.11.7. Be equipped with audible and visual alarms.
 - 6.11.8. Have a warning sign displaying prohibited material inside the hyperbaric chamber, which shall be posted at the chamber entrance **Appendix 3**.
 - 6.11.9. Have an external breathing air source in case of emergency evacuation from the chamber.

- 6.11.10. Have acrylic windows with certification such as a "U"/a partial "U2" ASME stamp, with PVHO-1 or an equivalent certification.
- 6.11.11. Have viewing ports if not completely transparent.
- 6.11.12. Have a manual access for the operating controls for pressurization, depressurization, parameter condition monitoring and safety interlocking.
- 6.11.13. Have external exhaust termination with the pipe elbow facing down.
- 6.11.14. Have a dedicated vent line to release the O_2 after treatment.
- 6.11.15. Have earth grounding system with a regular documented maintenance.
- 6.11.16. Be grounded to a common building (pipe/steel) or true earth ground.
- 6.11.17. Have the resistance between the grounded chamber hull and electrical ground not exceeding one (1) Ohm (DO NOT use the building electrical panel or wall outlet ground to ground the chamber).
- 6.11.18. Have a quick release access door.
- 6.11.19. Have all openings leading from the chamber to external fittings or controls and shall be free from obstruction.
- 6.12. Gas cylinder storage room shall
 - 6.12.1. Be large enough able to store enough (H) cylinders and manifolds for the reserve breathing gases required for chamber operations.
 - 6.12.2. Have a minimum of six (6) medical O_2 tanks.
 - 6.12.3. Have a minimum of one (1) 400-liter liquid O_2 tank with vaporizer.
 - 6.12.4. Be designed to comply with DCD and NFPA 99 requirements.
 - 6.12.5. Have explosion proof electrical fittings.

- 6.12.6. Have an external exhaust ventilation provided outside the building area.
- 6.12.7. Have an automatic gas manifold monitored by alarm.
- 6.12.8. Maintain an alarm that monitors the high and low gas pressure.
- 6.12.9. Maintain documentation of staff training in emergency procedures in the event of any incident related to gas pressure release.
- 6.12.10. Have a concrete or tiled flooring.
- 6.12.11. Have a visibly displayed "No smoking" sign in this room.
- 6.12.12. Provide a door to the room with door vents for O_2 to pass in case of leakage from cylinders.
- 6.12.13. Provide access for a truck to refill the O_2 in case the health facility uses liquid O_2 for the treatment.
- 6.13. The health facility shall maintain the following medical equipment and supplies:
 - 6.13.1. Apparatus to measure blood pressure.
 - 6.13.2. Electrocardiographic monitoring equipment.
 - 6.13.3. Resuscitation trolley equipped with relevant resuscitation equipment and apparatus, medical O_2 and medications.
 - 6.13.4. Intravenous (IV) supplies such as syringes, needles, tape, etc.
- 6.14. The health facility shall maintain a record of HBOT chamber:
 - 6.14.1. Installation checklist
 - 6.14.2. Assessment checklist
 - 6.14.3. Operational checklist
 - 6.14.4. Cleaning checklist

- 6.14.5. Maintenance log
- 6.14.6. Log of use of the chamber.

7. STANDARD THREE: HEALTHCARE PROFESSIONALS REQUIREMENTS

- 7.1. Only a DHA licensed Consultant/Specialist Physician in Undersea Hyperbaric Oxygen

 Medicine can provide the HBOT Service.¹
- 7.2. The team providing HBOT services could comprise of the following; elaborated in Appendix 4.
 - 7.2.1. Physician responsible for the HBOT service provision
 - 7.2.2. HBOT Chamber Operator (HBOT Technicians)
 - 7.2.3. Inside Attendant (IA)- for class A chamber
 - 7.2.4. Outside Attendant- for class A chamber
 - 7.2.5. Registered Nurse (RN)
 - 7.2.6. Safety Officer
 - 7.2.7. Patient Care Coordinator/Administrator
 - 7.2.8. Fire Marshal.
- 7.3. Physician responsible for the HBOT service provision shall:
 - 7.3.1. Prescribe and supervise the safe provision of HBOT services.
 - 7.3.2. Be responsible for the overall medical care of the patient receiving the service.
 - 7.3.3. Be responsible for the quality assurance of the HBOT service.
 - 7.3.4. Be responsible for patients follow up after the hyperbaric treatment.

-

¹ The eligibility criteria for subspecialties is elaborated in the Unified Professional Qualification Requirements.

- 7.3.5. Define the protocol, procedures for the treatment and ensure they are adhered to.
- 7.3.6. Ensure healthcare workers in the facility are qualified and competent to perform their duties and knowledgeable of the risks and hazards.
- 7.3.7. Ensure policy and procedure manuals for the administration of the HBOT facility, the operation of equipment, and the management of patients are prepared, maintained and readily accessible to staff.
- 7.3.8. Assess the suitability and the fitness of the patient for HBOT.
- 7.3.9. Determine the risk benefit profile.
- 7.3.10. Interpret any related diagnostic testing.
- 7.3.11. Generate a therapeutic dosing profile.
- 7.3.12. Evaluate subsequent clinical course.
- 7.3.13. Manage any related side effects and complications.
- 7.3.14. Be present at the premises and immediately available at all times that the chamber is occupied and promptly respond and manage any critical events.
- 7.3.15. Ensure the safe and ethical care of patients.
- 7.4. Chamber Operator (HBOT Technician)
 - 7.4.1. Registered Nurses (RNs) with recognised training and adequate experience could be appointed as a Chamber Operator or a healthcare professional with minimum forty (40) hours face-to-face recognised training with certification and an experience for at least six (6) months as hyperbaric technicians could operate the chamber.

- 7.4.2. The Chamber Operator shall be trained to safely implement prescribed therapy.
- 7.4.3. Since the Chamber Operator is in-charge of operating the multiplace or monoplace hyperbaric chamber(s), his/her presence is essential during the working hours of the health facility providing HBOT services.
- 7.4.4. There shall be one (1) chamber operator for every two (2) monoplace chambers during all working hours of the health facility providing HBOT services.
- 7.4.5. At least one additional staff, preferably the Physician responsible for HBOT in addition to the Chamber Operator must be present during the treatment.
- 7.4.6. If necessary (as determined by the hyperbaric physician), it is acceptable for an Inside Patient Attendant or an Accompanying person, such as the parent of a small child, to accompany a patient inside a monoplace chamber.
- 7.4.7. There shall be two (2) Chamber Operators for every multiplace chamber during all working hours of the facility or two (2) chamber operators where multiplace chambers are co-located and operated with a single centralised operating console, with direct visual access to the entire HBOT chamber(s).
- 7.4.8. The Chamber Operator operating Class B chambers shall ensure the following:
 - a. Conduct a general check-up of the patient, including vital signs and the initial assessment and file this in the medical records.
 - b. Maintain visual and audio contact with patient during their treatment.

- Notify the physician immediately in case a patient complains or shows signs suggesting an unanticipated change in status.
- d. Not assume any of the responsibilities of the Hyperbaric Physician.
- e. Not carry out hyperbaric treatment without patient-specific hyperbaric physician signed medical orders.
- 7.4.9. The Chamber Operator of a multiplace chamber must be qualified and trained to carry out the specialized chamber operations. The Chamber Operator, operating the multiplace chamber shall be responsible to ensure the following:
 - Operate the internal and external devices of the chamber in-between sessions.
 - b. Control and operate the mechanisms for compression and decompression, $\label{eq:compression} \text{and deliver gas mixtures and } O_2.$
 - c. Control and application of the safety regulations concerning prevention of fire and O_2 toxicity.
 - d. Calculate, apply and control of compression and decompression schedules for patients, specialists and/or physicians, nurses and attendants, apply decompression stops, when necessary.
 - e. Intervene inside the chamber under pressure, in order to control or check the correct operation of the pneumatic circuits or devices.
 - f. Adapt and check the medical instruments carried by the patients before being introduced into the chamber, in order to assure their correct operation, and to avoid dangerous or undesirable effects.

- g. Control and check the operation of auxiliary facilities of the chamber: air compressors, sources of compressed air or medical gases, air reserves, pneumatic circuits, control systems.
- h. Maintain the facility by doing small repair jobs or technical interventions in case of problems which may occasionally occur, and which do not require the intervention of highly specialized technical staff.

7.5. Inside Attendant (IA)

- 7.5.1. The physician responsible for the HBOT service shall ensure that the IA is DHA Registered Nurse (RN) and/or HBOT technician who is mentally and physically fit to work in a Class A multiplace chamber with compressed air. The minimum patient to IA ratio for optimal operational safety should typically be as follows:
 - a. Minimum staffing ratios for clinically stable patients to IA is 8:1. This ratio is comprised of ACLS certified healthcare professionals, who will be readily available in the event of any emergency. This ratio may be exceeded at any time based on patient acuity.
 - For complicated patients requiring increased level of personal care,
 minimal patient to IA ratio is 4:1.
 - For critical care patient, minimum patient to IA ratio of 1:1 (ventilated patients may require 2-staff per patient).
 - When critical care patients are treated along with either uncomplicated or complicated patients, staffing ratios for non-critical

patients remain as above, regardless of the number of staff necessary to safely and effectively treat critical patients.

- II. For critically ill patients or intubated patients it is recommended that a RN experienced with hyperbaric medicine be present inside the chamber with the patient at all times. The patient: IA ratio should be 1:1.
- 7.5.2. To reduce the risk of decompression illness for staff, exposure should be based on the depth of pressure, gases breathed, bottom time, decompression profile and surface interval time as calculated using the US Navy Dive tables, Appendix 5.

The IA is recommended medical examinations as mentioned below and in Appendix 6:

- a. Before starting work as an IA.
- b. Periodic physical examination every five (5) years.
- c. A re-examination after a hyperbaric related injury or illness such as a known decompression sickness, arterial gas embolism, audio-vestibular illness, central nervous system dysfunction, when there is a change on the annual self-report, or as needed to determine fitness to work in hyperbaric conditions. A person should not be allowed to return to work after any significant injury or illness in hyperbaric conditions until released by the hyperbaric specialist to do so.

- d. The physician responsible for the HBOT shall provide a written fitness for duty report outlining the IAs medical condition and fitness to work in a compressed air environment or other hyperbaric activities and should indicate any restrictions that would apply to the IA's work activity in the report.
- e. An individual having certain conditions as elaborated in **Appendix 7** should be disqualified from engaging in working as an IA.

7.6. Outside Attendant

- 7.6.1. This could be a RN available to provide technical or patient support as needed.
- 7.6.2. The Outside Attendant shall remain in the room at all times when the chamber is pressurized so that the Chamber Operator has no additional responsibilities other than operating the chamber.

7.7. Registered Nurse (RN)

- 7.7.1. The ratio of the RN to the physician shall be 1:1.
- 7.7.2. The RN shall conduct the general check-up of the patient, such as vital signs, initial assessment etc. and document it in the health records.
- 7.7.3. The RN shall be trained and responsible for going through a checklist before placing the patient inside the chamber.
- 7.7.4. In case of a multiplace chamber, the RN could be the IA during treatment to monitor patients.
- 7.7.5. The RN shall be responsible to manage any medical emergencies that may arise when the patient is in the health facility.

7.8. Safety officer

- 7.8.1. Any staff employed by the HBOT facility could be nominated as the safety officer.
- 7.8.2. The safety officer shall undergo formal and comprehensive training in the safety aspects of hyperbaric medicine and related technology from National Examination Board in Occupational Safety and Health (NEBOSH) or Occupational Safety and Health Administration (OSHA).
- 7.8.3. The safety officer shall develop, maintain and manage a safety program based upon compliance with recognized standards, which shall demonstrate effective elements of hazard mitigation, while employing recognized risk management concepts.
- 7.8.4. The safety officer shall be responsible for maintaining a daily, weekly and annual checklist of the HBOT chambers.

7.9. Fire Marshal

- 7.9.1. Any staff employed by the HBOT facility could be nominated as the fire marshal.
- 7.9.2. The health facility shall ensure that the fire marshals receives formal training relevant to fire and related hazards and at least one (1) fire marshal is present on the premises during working hours.
- 7.9.3. The fire marshal shall orient and train the staff on fire safety measures and response to fire events in the health facility.
- 7.9.4. The training shall be documented and included in staff files.

- 7.9.5. The fire marshal shall conduct and document fire evacuation drills at least 2-3 times a year.
- h. The Clinical Privileging Committee (CPC) of the health facility shall privilege the relevant healthcare professionals of the HBOT team aligned with their education, training, experience and competencies. The privilege shall be reviewed and revised at regular intervals, as per the DHA Clinical Privileging Policy.
- 7.10. All healthcare professionals shall be trained in HBOT and have Basic Life support (BLS) and Advanced Cardiac Life Support (ACLS).
- 7.11. Valid certificate of Pediatric Advanced Life Support (PALS) when applicable.
- 7.12. All staff shall maintain their skills by relevant training and continuous education, which shall be documented.
- 7.13. Staff working under pressure in the chambers must undergo an appropriate initial and periodic medical examination to be recognised as fit for hyperbaric exposures.
- 8. STANDARD FOUR: PRE-HBOT EVALUATION, PATIENT SELECTION AND INFORMED

 CONSENT
 - 8.1. In case treating critically ill or unstable patients, HBOT shall be carried out only in hospital setting.
 - 8.2. The patient health records should be maintained as per the <u>DHA Guidelines for Managing Health Records</u>.
 - 8.3. The HBOT physician shall assess the patients for a complete clinical and physical examination, identify conditions that may increase the complexity of the HBOT Appendix 8 and only then determine the treatment plan.

- 8.4. The HBOT physician is required to assess and advise each patient prior to commencingHBOT, to ensure the following:
 - 8.4.1. The patient has a medical condition that is likely to benefit from HBOT.
 - 8.4.2. There are no absolute contraindications to HBOT and any relative contraindications are considered and appropriately managed.
 - 8.4.3. Any anticipated or potential risks are considered and a plan is in place to amend them if required.
- 8.5. All patients or legal guardian of children or incompetent patients shall sign an informed consent form before starting the HBOT.
- i. The Informed Consent forms shall be in Arabic, English or other language based on community needs, in accordance to the DHA Guidelines for Patient Consent Appendix 9.
- 8.6. If a patient approaches a HBOT facility more than once for different medical conditions then a new informed consent shall be requested due to the change in medical condition and hence change in treatment plan.

9. STANDARD FIVE: MANAGEMENT OF HBOT

- 9.1. Prior of HBOT treatment ensure the following:
 - 9.1.1. Perform a Safety Time Out and Pause (STOP) prior to every HBOT. STOP shall include the following:
 - a. Verifying "Right patient, Right Treatment and Right Safety".
 - b. Checking the patient ground (monoplace).
 - c. Ensuring all prohibited items are removed from the chamber (both monoplace and multiplace).

- 9.1.2. The treatment profile and staffing plan should be confirmed and the completed STOP checklist dated and signed by two staff members prior to closing the door of the chamber.
- 9.1.3. Patient has had a shower to ensure that the patient is free of any makeup or other flammable lotions or balms.
- 9.1.4. Patient wears cotton scrubs without pockets that are provided by the health facility.
- 9.1.5. Patient wears a grounding device (where required).

10. STANDARD SIX: DISCHARGE AND POST-OPERATIVE CARE

- 10.1. Specific discharge criteria are recommended for patients receiving sedation.
- 10.2. Each patient should be periodically reviewed for the following:
 - 10.2.1. Determine progress of condition being treated.
 - 10.2.2. Confirm or modify the treatment plan.
 - 10.2.3. Patient treatment limitations.
- 10.3. Complications of HBOT should be recorded when indicated.

11. STANDARD SEVEN: EQUIPMENT AND MAINTAINANCE

- 11.1. The equipment used shall be approved by at least two (2) of the following international authorities:
 - 11.1.1. Food and Drug Administration (FDA)
 - 11.1.2. Health Canada
 - 11.1.3. Conformité Européenne (CE)
 - 11.1.4. Australian Register of Therapeutic Goods (ARTG)

- 11.1.5. Ministry of Food and Drug Safety (MFDS) Korea
- 11.1.6. Taiwan Food and Drug Administration (TFDA)
- 11.1.7. Japans Ministry of International Trade and Industry (MITI)
- 11.2. The equipment shall be registered with the Ministry of Health and Prevention (MOHAP) in the UAE.
- 11.3. Inflatable, collapsible or portable chambers shall not be used in any health facility as they are NOT recognised medical devices for hyperbaric oxygen treatment by the FDA and no supporting clinical studies validate their effectiveness.
- 11.4. The multiplace equipment shall be continuously and accurately monitored for the following:
 - 11.4.1. Oxygen Concentration
 - 11.4.2. Carbon di Oxide Concentration
 - 11.4.3. Humidity
 - 11.4.4. Temperature
 - 11.4.5. Pressure.
- 11.5. Equipment used for these measurements shall be periodically calibrated according to manufacturer's recommendations and requirements.
- 11.6. The internal oxygen concentration for the monoplace chambers shall be continuously monitored.
- 11.7. The inside and outside of the HBOT chambers must be cleaned by a staff who is trained for this purpose with approved cleaning agents Appendices 10-11.

12. STANDARD EIGHT: FIRE SAFETY

The risk of fire is a major concern in the hyperbaric environment. The potential for accidental ignition of flammable materials is increased in the hyperbaric environment and their burning rate is markedly enhanced by a raised percentage or raised partial pressure of O_2 .

- 12.1. The facility shall exclude flammable material or other sources of ignition from the treatment room by a rigorously enforced "Contraband Policy".
- 12.2. Patients when undergoing HBOT treatment should wear only 100% cotton or other hyperbaric compatible materials.
- 12.3. All the linen used inside the hyperbaric chamber shall be 100% cotton.
- 12.4. The facility should comply DCD and NFPA 99 (chapter for HBOT) regarding fire safety standards.
- 12.5. There should be evacuation maps posted in the facility to indicate current locations marked with "You are here" to provide information regarding escape routes, fire exits and fire extinguishers.
- 12.6. All fire exit doors shall be unobstructed and in proper working condition with exit points marked correctly.
- 12.7. There shall be "No Smoking" signs visibly displayed all around the facility.
- 12.8. The facility shall establish a fire safety plan for early detection, confining, extinguishment, rescue, evacuation and alerting the DCD.
- 12.9. The facility shall maintain fire extinguishers, smoke alarms, sprinkler system and other fire protection equipment and devices as per the DCD requirements.

- 12.10. Fire extinguishers shall be properly and accessibly located. They must be fixed securely on the wall with safety pins fitted, seals intact, charged and current service record available.
- 12.11. The facility shall have trained staff as fire marshals and at least one (1) fire marshal shall be present on the premises during working hours.
- 12.12. Staff shall have fire and safety training to respond to fire events in the building.
 Orientation on the fire safety measures must be included in new staff induction program.
- 12.13. All staff shall be aware of the following:
 - 12.13.1. Location and use of fire hose reel/cabinets/blankets
 - 12.13.2. Assembly points
 - 12.13.3. Fire alarms/call points break glass/pull station
- 12.14. Fire evacuation drill should be conducted and documented at least two (2) times a year.
- 12.15. Fire in the facility buildings and evacuation procedures including removing patients from the chamber should be documented.
- 12.16. The installation of additional electrical equipment should be limited only for devices, which comply with hyperbaric conditions.

13. STANDARD NINE: MANAGEMENT OF HBOT PATIENTS DURING A PANDEMIC

13.1. Both monoplace and multiplace chambers are constrained spaces to which both patients and staff are exposed. Additionally, monoplace chambers have limited access for cleaning and this requires the use of long-handled cleaning devices. The cleaning

may therefore not be completely effective or may miss some areas, without proper care, hence the Hyperbaric facilities shall ensure the following:

- 13.1.1. Adopt and implement policies that require effective cleaning after every patient.
- 13.1.2. Ensure staff wear appropriate PPE especially when opening the HBOT ClassB chamber as they could be exposed to contaminated droplets.
- 13.1.3. Training, practice and simulation of all HBOT staff.
- 13.1.4. HBOT staff are familiar with all infectious precautions being implemented by the health facility and the health authorities and take additional precautions specific to the hyperbaric service.
- 13.1.5. Screening of patients and staff before entering the HBOT facility.
- 13.1.6. All patients shall be screened for temperature and other COVID-19 symptoms prior to entering the HBOT chamber. If found to be symptomatic, they should leave the health facility and produce a negative PCR test result (not older than 48 hour) to continue the HBOT service.
- 13.1.7. Deny permission to visitors, family or non-essential staff within the unit.
- 13.1.8. All breathing equipment including head tents, oxygen masks or BIBS masks must be thoroughly disinfected after each use even if assigned and labelled for individual patients.
- 13.1.9. Disinfection is also required for gurneys, stretchers, wheelchairs and patient seating after each use.

- 13.1.10. It is recommended that each hyperbaric facility make a list of items that are commonly touched by hands, such as faucets or door handles, and implement a schedule of frequent disinfection.
- 13.1.11. Patient personal clothing and other items are also a potential source of infection. Bins for storage of these items during HBOT are best labelled and kept for each individual patient but in any case, must also be disinfected after each use.
- 13.1.12. Use of alcohol based had sanitizer could pose a risk with O₂ and to chamber acrylics, hence frequent hand washing for staff and patients is recommended.

APPENDICES

APPENDIX 1: INDICATIONS OF HBOT

	Indication for HBOT
1.	Air or gas embolism
2.	Acute Traumatic Ischemia
3.	Anaemia (severe anaemia when blood transfusions cannot be used)
4.	Burns (severe and large burns treated at a specialized burn centre)
5.	Carbon Monoxide poisoning
6.	Carbon Monoxide poisoning complicated by cyanide poisoning
7.	Clostridial Myositis and Myonecrosis (Gas Gangrene)
8.	Crush injury
9.	Compartment Syndrome
10.	Decompression sickness (diving risk)
11.	Idiopathic sensorineural Hearing loss (complete hearing loss that occurs suddenly and without
11.	any known cause)
12.	Infection of the skin and bone (severe)
13.	Necrotizing soft tissue infections
14.	Delayed Radiation injury
15.	Skin graft flap at risk of tissue death
16.	Vision loss (when sudden and painless in one eye due to blockage of blood flow)
17.	Wounds (non-healing, diabetic foot ulcers)
18.	Refractory Osteomyelitis
19.	Intracranial Abscess

APPENDIX 2: CONTRAINDICATIONS OF HBOT

Contraindications	Condition or Disease					
	Pneumothorax (a life threatening condition)					
Absolute	2. Treatment with cytostatic agents such as Adriamycin, disulfiram, cis-					
Absolute	platinum, sulphamylon (HBOT increases their side effects)					
	3. Severe Heart Failure					
	Upper respiratory tract infections,					
	Pregnancy (only carbon monoxide poisoning is an indication for HBOT)					
	Epilepsy					
Relative	Emphysema					
	Fever					
	Ear surgeries and chest					
	Metastatic cancer					

	Advisable to take proper precautions in the following conditions						
1.	Individual with a pacemaker						
2.	Pregnant woman						
3.	Individual with certain types of lung diseases, because of an increased risk for a						
	collapsed lung						
4.	Individual taking certain chemotherapy drugs						
5.	Patient with a collapsed lung						
6.	Individual taking the drug disulfiram (Antabuse)						
7.	Individual using the topical cream sulphamylon						
8.	Patient with heart failure; HBOT can make symptoms worse						
9.	Individual with a cold or a fever						
10.	Individual who is claustrophobic						

Note: HBOT should not be used for:

 Conditions not approved by FDA; unless a part of a clinical trial that has been approved by the DHA Research Ethical Committee.

Unproven purposes such as cure cancer, Autism, Alzheimer's disease or Anti-Aging.

APPENDIX 3: POSTER AT THE ENTRANCE OF THE HBOT CHAMBER

The following is allowed inside the hyperbaric chamber:

- Yourself; free of hair products, make-up, perfume/cologne, hearing aid, anything on the list below "List of Prohibited Items"
- 2. Undergarments: Only when permitted on an as needed basis. If permitted, please wear 100% cotton undergarments. (Do not wear Lycra or spandex brassier or underpants)
- 3. Center issued scrubs or gown
- 4. Water bottle provided by your chamber technician

List of Prohibited Items- The letter(s) beside each item indicates the general reason for prohibiting it, the coding is elaborated below)

- 1. Adhesives (F)
- 2. Aerosols (D, E, F)
- 3. Aftershave (D, F)
- 4. Alcohol (D, F, P)
- 5. Batteries with unprotected leads (F)
- 6. Chemical cleaners, e.g.; trichloroethylene, 'Freon', etc. (D)
- 7. Cigarettes, cigars, tobacco of all kinds (F, M)
- 8. Cleansing powder (C, F, P)
- 9. Clothing, bedding included blankets, sheets, pillows, mattresses, etc. (F)
- 10. Drugs, non-prescribed (P)
- 11. Electrical equipment including tape recorders, radios, etc. (F)
- 12. Explosives (F)
- 13. Glass thermometers, including batteries containing mercury (C, D, P)
- 14. Ink pens (M)
- 15. Lighters, matches (F)
- 16. Newspaper (F)
- 17. Non-diving watches (L, M)
- 18. Petroleum based lubricants, grease, fluids (F)
- 19. Sugar and fine powders and other flammable food stuffs (E, F)
- 20. Thermos flasks (L, P)

- **C** possibility of damaging the fabric of the chamber
- **D** contamination of the environment
- **E** explosion risk
- F fire source (including static charges) or a combustible substance
- L could be broken or damaged by pressure
- M will possibly cause a mess
- P affects ability of diver

More specifically items strictly excluded from the chamber include but not limited to:

- 1. Shoes/stockings (cotton socks permitted)
- 2. All flammable fabrics (wool, synthetics, bedding)
- 3. Street clothing, including undergarments made of wool, nylon, silk or satin
- 4. Bras with metal under-wiring
- 5. Any static-producing material (Velcro)
- 6. Oils and grease (make-up, lipstick, hair preparations, sunscreen, skin lotion)
- 7. Hairspray/gel
- 8. Nail polish
- 9. Perfume/cologne
- 10. Jewellery (all must be removed or covered with white tape)
- 11. Chewing gum
- 12. Dentures
- 13. Metallic objects (bobby pins, hair clips, car keys)
- 14. Batteries/battery-powered equipment (headphones, watches, hearing aids)
- 15. Electronics/MP3 players
- 16. Phones/pagers
- 17. Medications
- 18. Newspapers/magazines
- 19. Coins/money
- 20. Petroleum-based dressing (Vaseline gauze)
- 21. Alcohol-based applications
- 22. Hand warmers/transdermal heat patches
- 23. Cigarettes
- 24. Matches/lighters
- 25. Sharp toys

26. Unnecessary items

APPENDIX 4: STAFFING MATRIX FOR CLASS A AND CLASS B CHAMBERS

180	6			4	5	6											
190	5			3	5												

^{*} Highest repetitive group that can be achieved at this depth regardless of bottom time.

Residual Nitrogen Time Table for Repetitive Air Dives

^{**} Residual Nitrogen Time cannot be determined using this table (see paragraph 9-9.1 subparagraph 8 for instructions).

[†] Read vertically downward to the 30 fsw repetitive dive depth. Use the corresponding residual nitrogen times to compute the equivalent single dive time. Decompress using the 30 fsw air decompression table.

APPENDIX 6: MEDICAL TESTS FOR INSIDE ATTENDANT (IA) FITNESS TO WORK IN CLINICAL

HYPERBARIC CHAMBERS

Test	Initial	Periodic	Comments
Medical History	Yes	Annually	Include predisposition to
			loss of consciousness,
			vomiting, cardiac history,
			low O ₂ saturation, CO ₂
			retention, serious blood
			loss, or anything that in the
			opinion of the licensed
			practitioner would interfere
			with work in hyperbaric
			conditions
Physical	Yes	Every 5 years	Include predisposition to
Examination		and as deemed	loss of consciousness,
		necessary	vomiting, cardiac history,
			low O ₂ saturation, CO ₂
			retention, serious blood
			loss, or anything that in the
			opinion of the licensed
			practitioner would interfere
			with work in hyperbaric
			conditions
Pulmonary	Yes	As medically	To include FEV1, FVC, PEF,
Function		indicated	FEF25-75.
Audiogram	Yes	As per OSHA or	Pure tone audiology
		institutional	
		policy , or as	
		medically	
		indicated	

Routine	Yes	As medically	
Urinalysis		indicated	
Haematocrit,	Yes	As medically	
Haemoglobin,		indicated

Chest x ray	Yes	As medically	PA and LAT
		indicated	
EKG: Standard	Yes	As medically	Required initially to
(12 lead)		indicated	establish baseline
EEG	As medically	As medically	
	indicated	indicated	
Visual acuity	Yes	As medically	Vision, near & distant,
		indicated	uncorrected and corrected,
			to include colour
Toxicology	According to	According to	
Screen	institutional	institutional	
	policy	policy	

APPENDIX 7: DISQUALIFYING CONDITION FOR IAS

An IA having any of the following conditions should be disqualified from engaging in work in the clinical hyperbaric chamber.

- 1. History of seizure disorder, other than early childhood febrile seizures
- Bullous, cystic or cavitary lung disease, significant obstructive or restrictive lung disease,
 recurrent pneumothorax
- 3. The requirement for oxygen at sea level is disqualifying.
- 4. Chronic inability to equalize sinus or middle ear pressure3.
- 5. Significant central or peripheral nervous system disease or impairment
- 6. Alcoholism, drug abuse and/or history of psychosis
- 7. Hemoglobinopathies associated with comorbidities
- 8. Grossly impaired hearing
- 9. Significant osteonecrosis
- 10. Chronic conditions requiring control by medication may be disqualifying 4.
- 11. Pregnancy

_

³ This is not an absolute exclusion and should be considered on an individual basis.

⁴ Not all such conditions are absolute exclusions. These should be considered on an individual basis.

APPENDIX 8: SOME FACTORS THAT MAY INCREASE COMPLEXITY OF HBOT

Airway factors	Neurologic/psychiatric
Tracheostomy	Seizure disorder
Intubated/artificial airway	Unconscious, neurologic deficit
Airway abnormalities	Cognitive impairment
Sleep apnea or anticipated airway difficulty	Severe/chronic pain
Breathing factors	Profound anxiety/requirement for sedation
Mechanical ventilation	Behaviour disturbances
PEEP/CPAP requirement	Psychosis
COPD/asthma/pneumonia	Profound sedation or general anesthesia
Pneumothorax/chest tube	Organ dysfunction/systemic disease
Circulatory factors	• Diabetes
Cardiac arrhythmia	Critically ill patients/ICU/CCU
Hypotension, hypertension	Continuous bladder irrigation
Congestive heart failure, poor contractility	Burns or extensive wounds
Severe/unstable ischemic heart disease	Patient characteristics
Inotropic or vasoactive medications	Multiple concurrent medical conditions
Invasive monitoring (arterial, CVP, PA)	Emergency cases
Intravenous fluids	Infants and small children
Other	Elderly
Anaphylaxis, latex allergy	Morbid obesity
Drug-resistant organisms (MRSA, etc.)	Recent or impending major surgery
Pumps, patches and pacemakers	

APPENDIX 9: SAMPLE INFORMED CONSENT FORM FOR HBOT

trained staff to treat me with hyperbaric oxygen and to render such other supportive or additional care that their professional judgment may dictate during the course of the above treatment. The staff have explained to me the protocols and procedures for Hyperbaric Oxygen Therapy (HBOT), and the adjunctive treatments. I have been provided with an orientation to HBOT which has included (but was not limited to) indications, contraindications, risks and side effects, benefits, safety, equalization techniques, patient rights, flying after treatment, use of tobacco and HBOT and a chamber and facility overview. I have been made aware of the possible risks and side effects of HBOT including but not limited to: Barotrauma in the ears sinuses or teeth, Pulmonary Barotrauma, Oxygen Toxicity, Fire risks, Risk of near-sightedness, Maturing or ripening cataracts, Temporary improvement in far-sightedness, Numb Fingers, Serious Otitis, Fatigue, Decompression Illness, Gas Embolism. I have been given an opportunity to obtain further information and to ask questions about HBOT, and I understand that I can ask questions or stop treatment at any time. I consent to	I, do hereby authorize and its

APPENDIX 10: RECOMMENDATIONS FOR CLEANING AND PREVENTION OF CROSS-

INFECTION IN MEDICAL HYPERBARIC TREATMENT FACILITIES.

The prevention of cross-infection in the HBOT facilities requires a comprehensive program that extends far beyond the cleaning of hyperbaric chambers. The components of such a program should include:

- 1. Documented adherence to infection control policies of the health facility.
- Surveillance and testing for antibiotic resistant bacteria and by routinely sending patient swabs for culture and sensitivity tests.
- 3. Hand hygiene requirements before and after HBOT
 - a. Patients
 - b. Staff
- 4. Cleaning of washrooms and change rooms immediately after use by patients known to have antibiotic-resistant organisms and before other patients use these areas.
- 5. Immediate cleaning and disinfection of obvious gross soiling of areas or equipment.
- Policies and procedures to help prevent gross contamination and soiling such as:
 - a. Appropriate management of ostomies, bladder catheters and patient drains.
 - Avoid treatment of patients during episodes of nausea, vomiting or diarrhea when practical.
 - c. Use of diapers, garments and drapes to reduce contamination of hyperbaric facilities.
- 7. Adoption of policies requiring universal infectious precautions.
- 8. Policies to eliminate or reduce physical contact between patients.

- Cleaning and disinfection of blood pressure cuffs and other equipment that comes into contact with patients.
- 10. Appropriate treatment and cleaning of wounds.
- 11. Periodic education of hyperbaric staff and patients about infection control.
- 12. Safe disposal of potentially infectious materials and fluids.
- 13. Appropriate use of gloves, gowns and other PPE.
- 14. Cleaning and disinfection of BIBS masks and head tents before reuse by another patient.
- 15. Policies to ensure single-patient-use supplies such as oxygen masks are used only for one patient.
- 16. Ensuring that any garments or bedding that is reused is stored and labelled separately for individual patients.
- 17. Changing and laundering of linens and bedding.
- 18. Segregation and isolation of patients.
 - a. Where practical do not treat patients with resistant organisms in a multiplace chamber with other patients or ensure adequate separation between patients.
- 19. Liaison with infectious disease specialists and participation in health facility infection prevention programs.
- 20. Scheduling of patients with known infectious potential at the end of the day or before a planned complete cleaning and disinfection of the hyperbaric chambers.
- 21. Monoplace chambers cleaning:
 - a. Must comply with the manufacturer's instructions
 - b. Use only approved cleaning agents (see below)

- c. Surface disinfection of rails of stretchers between every case
- d. Brief cleaning (< 5 minutes) after every patient
- e. Comprehensive cleaning (30 minutes) at the end of each day and after all cases of resistant organisms or obvious contamination or soiling.

22. Multiplace chambers

- a. Cleaning procedures vary according to the design of the chamber such as:
 - I. Rounded chambers with removable floor board
 - II. Rectangular chambers with flat non-removable floors
- b. Disassembly or removal some of chamber components may be required for thorough cleaning and disinfection although this may also increase the risk of infections
- c. Comprehensive cleaning and disinfection is required at least weekly, after treatment of contaminated patients and in the event of gross or obvious soiling or contamination.
- d. Use only approved cleaning agents and ensure removal of these or dissipation of any odours prior to pressurizing the chamber again.

APPENDIX 11: CRITERIA FOR SELECTION OF CLEANING AGENTS

In selecting suitable cleaning and disinfecting agents, the following criteria should be considered:

- Effectiveness against the expected spectrum of bacteria, viruses, fungi and other microorganisms
- 2. Compatibility with chamber occupants (safe for human use)
- Compatibility with chamber materials (non-corrosive & non-degrading)
- 4. Fire safety in terms of volatile compounds (no flammable vapours)
- 5. Residue to be harmless/non-toxic and non-flammable
- 6. Acceptable odour
- 7. Application requirements (ease of use)
- 8. Availability and price

The most common constituent of suitable hyperbaric cleaning and disinfecting agents is a quaternary ammonium compound, which is non-corrosive, suitable for use with plastics, acrylic materials, rubber and metals.
